

Hex-3R® Composite Strengthening Systems

Wrap 230™

The Hex-3R® Composite Strengthening System is a carefully designed portfolio of high strength and modulus fabrics that are rugged, flexible and easy to field fit for efficient application. Hexcel Corporation's expertise in fabric architecture uses E-glass and carbon fibers to provide a range of durability, strength and modulus to meet engineering and aesthetic requirements.

Wrap 230™ is a 6 oz/yd² (230 gsm) carbon unidirectional fabric. Wrap 230™ is used where additional strength, modulus or environmental durability is required and is compatible with any of the Hex-3R Epoxy™ 300 series epoxy resins. This fabric is registered with ICBO.

Where to Use

- Loading increases
- Seismic strengthening
- Temporary strengthening
- Change in structural system
- Design or construction defects

Advantages

- Used for shear, confinement or flexural strengthening
- Flexible, can be wrapped around complex shapes
- Lightweight
- Non-corrosive
- Acid resistant
- Low aesthetic impact
- Economical

Packaging

Rolls: 12 or 24 in. x 150 linear feet

Carbon Fiber Properties:

Number of Filaments	12,000
Tensile strength (psi)	560,000
Tensile modulus (msi)	33
Density (g/cc)	1.77
Elongation (%)	1.6

*Properties determined by testing 24 samples prepared per the applicable ASTM procedure. All other tests were based on 6 coupon samples. All data relates to the test program run in 2000 on specific Hexcel Hex-3R products and is expected to be representative of the product produced during that time period.

¹ Average data is typical of the results found in the year 2000 testing program

² Design data is defined as the average value minus 3 standard deviations – based on year 2000 test program.
